Acrylic Pocket Position

The Pocket is positioned as indicated. Centrally across horizontal unless required differently.

(It can be positioned left or right if required by prior instruction should this fit your design requirement better)

Acrylic Pocket is made from 3mm acrylic with the fold at the base. Total width 6mm.

Artwork Preparation

For linework, graphics and lettering
Vector files work best ie:

adobe illustrator .eps format files.

Ensure your artwork is either set to be all cmyk or all pantone colours.

It is safest to supply us with hi-resolution .pdf files for your final artwork.

Where you are using bitmap images the dpi needs to be 144 dpi when supplying at 100% size artwork.

The quality of the original image is critical - but it can depend upon the type of overall design and detail.

We will advise if in doubt... and also how to prepare artwork if in doubt.

Please avoid resizing images more than once in photoshop - the more times you resize or rescale, the worse the image degrades.

Allow a 10mm bleed on all sides and please take note that 85mm of the base is not visible as shown on illustration, but we advise your image still continues behind this area.

ADDING WEDGE BASE ADDS ANOTHER
8MM TO TOTAL HEIGHT
